## **Academic Project**

**Final Semester Project** (Application for Sharing with WI-FI Android App)

**Description:** Application for android based mobile phones which collaborate with two android users using a WI-FI direct. Both mobiles will be connected through a WI-FI without connecting to a network, just like a **Bluetooth**. One user will be a server and the other one will be a client. On the server side application will be run in a background.

## Features:

- **File Sharing**

Two mobiles will be connected to each other by "Wi-Fi" and they will communicate to each other, If a secondary user is sending request to primary user and he accepts it, Then the list of items that are in the primary user's phone have, these items will be displayed on the secondary user's mobile phone and he can access data according to privilege's

**Public:-**

The secondary user can access all the data that is in the primary's mobile phone. E.G- contacts, inbox.

**Private:-**

Secondary user cannot access primary's contacts, messages and the folders. Primaries want to not allow access to secondary user.

- **Message Share**

Two mobiles will be connected to each other by "Wi-Fi" and they will communicate to each other, User secondary select the Message Share option and user secondary select the Messages that do not show on user primary mobile and save. Then user secondary work normally itself. User primary opens the messages and views the wanted messages and also saves into his mobile.

- **Contact Sharing**

Two mobiles will be connected to each other by "Wi-Fi" and they will communicate to each other, User secondary select the Contact Share option and user secondary select the Contact that do not show on user primary mobile and save. Then user secondary work normally itself. User primary opens the Contact and views the wanted messages and also saves into his mobile.

- **Send Messages**

Two mobiles will be connected to each other by "Wi-Fi" and they will communicate to each other, If a secondary user is sending request to primary user and he accepts it, Then secondary user will write text from his mobile phone and send it to the primary user mobile phone from there the text will go to the destination.

**Restrictions:-**

Secondary user cannot send standard messages E.G- Balance shearing message, check balance E.T.C.

**Technologies Used:** Eclipse, Android 4.2.1 jelly Bean, WI-FI Direct.

## Professional Projects

### Instagram Video Downloader.

**Description:** Insta Video Downloader downloads videos from instagram.

**Technology/Platform:** Eclipse, Android Studio, RestApi

### Instagram Photos Backup.

**Description:** Instagram Photos Backup downloads, Photos from Instagram and allows the user to save it on Sd-card or On Drop-Box.

**Technology/Platform:** Eclipse, Android Studio, RestApi

**Technology/Platform:** Eclipse, Android Studio, RestApi

### InstaRepost

**Description:** What do you do when you want to Repost the any photo from Instagram You take a screenshot, crop it, copy caption, open it Instagram and blah blah blah. Quite hectic right Are you looking for a solution to repost photo on ONE click? Then you are at the right place InstaRepost app requires NO SIGN IN. Simply tab one button and it's done! Don't need to remember the username to give credit, you don't need to copy the caption or crop a screenshot, we do it all for you.

Repost photos with InstaRepost by ONE click

- No sign in, or sign up
- Don't need to remember or copy caption
- Give credit to the original page.

**Technology/Platform:** Eclipse, Android Studio, RestApi

## **Smart Job**

**Description:** Smart Jobs is a server client based application so we need to build an Interconnection between the server and client which will be done through web-services. A server holds a complete database and it also handles the request generated by the clients, respond to the queries and send notifications to users according to their account types and settings. suppose there's a person who need to bring a Moose Cake for his colleagues as he's having a birthday but due to shortage of time he couldn't go to the bakery in the morning to buy the required stuff so what he do now He needs that there is somebody in required locality, who can perform his tasks that allow a user to post an ad with a title, description, job expiry timings and by tagging a specific geographical locality in which he/she needs the services so if anybody(Registered User) willing to perform the task then he get an instant notification and he can respond to that notification to fix the deal. Google Maps and Background Services (Push Notification) are used.

**Technology/Platform:** Eclipse, Android Studio, RestApi

## **Android Watch Faces**

**Description:** 50+ Android watch faces design and build and test.

**Technology/Platform:** Android Studio, RestApi

## **Gaari. (Road Transport Pakistan Business)**

**Description:** Gaari is not a transportation carrier company neither does it provide (or intend to provide) any sort of transportation services. All companies listed within Gaari are all third party companies that are directly responsible for the provision of any relevant transport services. The Gaari application may be dependent on Internet speeds hence the users may experience degraded or slow services at times/places with slower internet connection speeds. The company does not take any responsibly of delays or delivery failures resulting from such problems. By downloading the app from iTunes or Google Market, the user will have to accept the terms and conditions set forth by the mentioned companies. The users are responsible for all belongings that they bring with them and the company is not liable for any loss of damage incurred during a ride booked by Gaari. The Company respects all copyright laws and expects its users to do the same. The company may block/suspend/terminate accounts of users who repeatedly infringe or are believed to be infringing the rights of copyright holders. The company reserves the rights to modify the above-mentioned terms & conditions or its policies relating to the Service or the Application at any time.

**Technology/Platform:** Android Studio, RestApi, GoogleMap

## **Daewoo Driver App.**

**Description:** Daewoo Driver App is basically design for Daewoo Drivers. It does communicate the user and driver.

**Technology/Platform:** Android Studio, RestApi, GoogleMap

## **Daewoo Express Mobile**

**Description:** An easy way to book and buy Daewoo Express tickets.

**Technology/Platform:** Android Studio, RestApi, Google Map

## **Daewoo Cab**

**Description:** Daewoo Cab is Pakistan's number 1 cab service. It started its journey from Lahore and initially was set up to pick up and drop off the passengers of its parent company Daewoo Express. The Daewoo name is already synonymous with reliability, security and dependability. Currently, the cabs are latest model Toyota Corollas.

What does the app do?

- DC App has an intuitive UI to make the user experience as easy as possible.
- Flexibility. The bookings can be done for anytime i.e. you can have a cab pick you now or you can add a booking for later.
- Feature rich. The app will show you the current and the previous trips you have taken. You can even use the app to give a rating to the car/ride or the driver. Booking repeat journeys is a breeze as the app will save your last 5 travelled locations.
- Safe and reliable. After booking, the name of the driver and the cab registration # will be sent to you to make sure you get into the right cab.
- Cash payments at the end of the ride. Currently the driver will take the cash from you at the end of the ride. Cashless payments are coming soon!

Using the app is a wonderful booking experience and a smarter way to travel. So go ahead download the Daewoo Cab app and book yourself a ride.

**Technology/Platform:** Android Studio, RestApi, Google Map
